

RStudio Setup

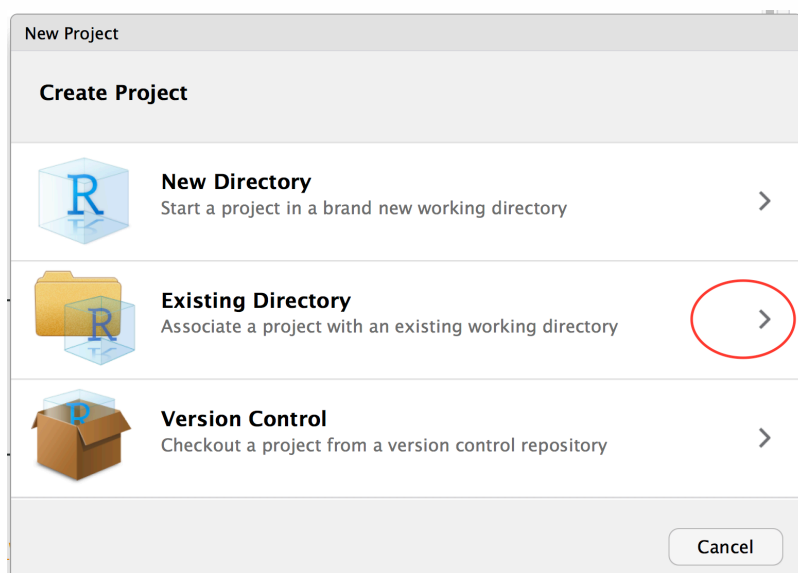

Create a folder for the project and add data...

Using Windows file explorer or Mac finder

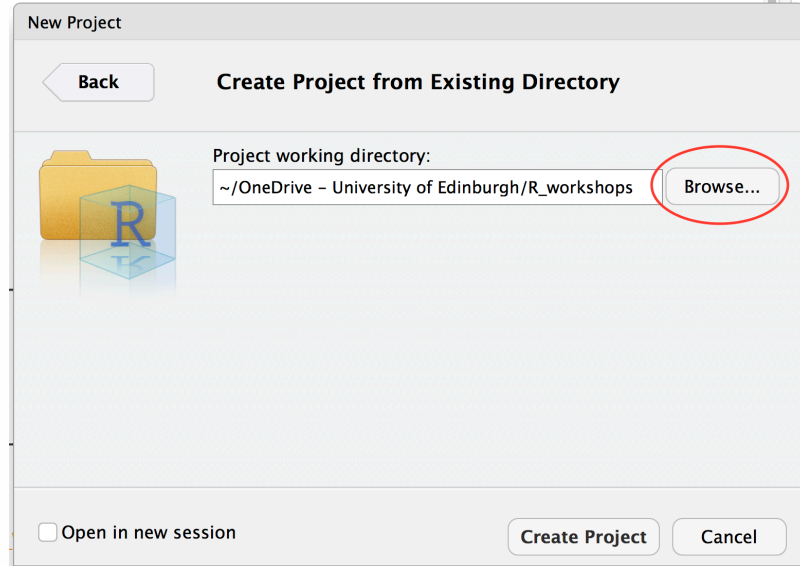

1. Create a folder on your computer
2. Copy the **aliendata_20180404.xlsx** file into the folder from the email I sent today or this dropbox link <https://bit.ly/2H1f1Nk>

Now, using RStudio...

3. Menu File > New Project

4. Choose “Existing directory”
5. Click “Browse” and find the folder/directory you set up earlier

6. Click “open” in the browsing window and then “Create Project”
7. Click on menu: Session > Set working directory > To project directory¹
8. Click on menu: Tools > Global options
9. Then Select “RMarkdown” on the left and make sure that you have the “Show output inline...” option UNTICKED
